

Soft Belt Loops

We are using mil-spec Pull the Dot directional snaps. The loops are adjustable and will fit most belts 1.25", 1.5" and 1.75" wide (depending on the size of your belt, you may want to trim the excess material from the loop). They come with all needed hardware to mount them directly to our Kydex holster. Please note, the snaps on these loops can be very tight when you first get them. If you have difficulty unsnapping them, use a flat blade screw driver or similar tool. Insert it between the male and female snap heads on the outside of the loop and twist to open them. After several times opening and closing, they will loosen up for you.

For customers who ordered Alpha appendix-style holsters, the struts are designed to allow you to adjust the height of the holster, allowing you to carry in the normal position, or allowing you to lower the holster to carry in a deep concealment position. On our appendix sub-compact holsters with short barrel lengths, you may have to trim the length of the struts that attach the soft belt loop. This can be accomplished using things like shears, coping saws, jig saws, or by scoring with a razor knife several times and snapping off. Then use a piece of fine sandpaper to polish the cut edges.
